   Event handling
   Java script
   Css (Cascading style sheets)

* The input is useful for creating the forms

⇒ We can change the input like text, Number, Rangle.

we will also have the Arrow Symbols which are Useful to change the Numbers.

we also use the type for date Month year etc...

place holder → Attribute.
                    Container text.

Type Submit → Used to Submit form type

About API

About JSON

API (Application Programming ~~Language~~ Interface)

We are using this API in our daily works, it is really very important to understand about this. & how it will work.

There is an API which is used to connect to Social logins that is known as the OAuth (Open Authentication) where we can logic Github, Apple, Software facebook, Google. we should connect to this API. we can't get access to code.
